

StreamVault — Data Privacy & Content Policy Guidelines

Legal & Compliance Division | Version 3.2 | 2025

Data Access Policy

All viewer personally identifiable information (PII) including names, email addresses, payment details, and precise location data is classified as Level 3 Confidential. Access requires role-based authorization and is logged for audit purposes. Analytical queries must use anonymized or aggregated data unless explicitly authorized by the Data Governance team.

AI System Policy

AI-powered analytics tools must operate through approved data access layers. Direct database access by AI systems is prohibited. All AI-generated insights must be traceable to source data. Sensitive fields (viewer PII, salary data, unreleased content details) must be masked before AI processing. AI systems must log all data requests for compliance review.

Content Classification

All content is classified as General Audience (GA), Mature (M), or Adult (A). Marketing materials must match content classification. Regional compliance must be verified before international distribution. User-generated content undergoes automated screening within 24 hours of submission.
